

MUHAMMAD HAMIZAN BIN BORHAN

hamizan.borhan2000@gmail.com | +60 14-266 5643 | Bukit Jelutong, Shah Alam, Selangor

PROFESSIONAL SUMMARY

Results-driven IT Support Specialist and Infrastructure Engineer with 3+ years of hands-on experience in network administration, server management, virtualization, and system security. Proven ability to maintain high system availability, manage IT infrastructure, and collaborate with cross-functional teams and vendors on technology upgrades. Actively transitioning into a DevOps role, with practical skills in Linux administration, VMware/Hyper-V virtualization, network configuration, and automation tooling. Committed to bridging infrastructure operations with modern DevOps practices to improve deployment efficiency, system reliability, and operational performance.

CORE COMPETENCIES & TECHNICAL SKILLS

Infrastructure & Systems

- Linux Administration (open-source OS management), Windows Server, Active Directory
- VMware vSphere, Hyper-V — virtual machine provisioning and environment management
- Server configuration, patch management, performance monitoring, and preventive maintenance

Networking & Security

- TCP/IP, OSI Model, VLANs, routing protocols (IP addressing, access control lists)
- Fiber optic cabling, structured cabling, Ethernet switching, OTDR/power meter diagnostics
- Antivirus management, log analysis, endpoint security, access control systems
- Ekahau — wireless network site survey and RF heat map analysis

DevOps & Automation (Working Knowledge)

- Bash/Shell scripting for task automation; familiar with CI/CD pipeline concepts
- Basic HTML & CSS; familiar with Git version control fundamentals
- Containerization concepts: Docker (foundational); exposure to infrastructure-as-code principles

Tools & Platforms

- Ticketing & asset management, IT budgeting, vendor coordination, PPM scheduling
- CCTV, barrier gate, and physical security system maintenance

PROFESSIONAL EXPERIENCE

IT Technical Support Engineer | Foxboro (M) Sdn Bhd — Bukit Jelutong

November 2023 – Present

- Delivered Tier-1 and Tier-2 IT support across all departments, resolving hardware, software, and network issues within defined SLAs to maintain organizational productivity.
- Administered and monitored server infrastructure (Windows/Linux), ensuring 99%+ uptime through proactive maintenance, patch deployment, and performance tuning.
- Managed VMware and Hyper-V virtualization environments, provisioning and maintaining virtual machines to support business applications and reduce hardware costs.
- Led vendor coordination for IT hardware and software upgrades, delivering projects on schedule and within budget while aligning outcomes with business requirements.
- Operated endpoint security and antivirus platforms; analyzed system logs to proactively detect, investigate, and remediate threats before escalation.
- Contributed to IT asset lifecycle management — procurement, deployment, maintenance, and decommissioning — to ensure hardware availability and cost efficiency.
- Supported IT budget planning and resource allocation, identifying cost-saving opportunities while maintaining service quality standards.

IT Technician | Barika Technology (Deployed at UITM Puncak Alam) — Puncak Alam

January 2022 – October 2023

- Maintained and optimized campus network infrastructure, ensuring consistent high-speed connectivity and minimal downtime across multi-building facilities.
- Executed a structured Planned Preventive Maintenance (PPM) schedule covering barrier gate systems, CCTV infrastructure, and access control — reducing unplanned incidents by proactive identification of faults.
- Troubleshoot and repaired fiber optic networks using OTDR and power meter testing equipment, restoring service continuity and documenting findings in technical reports.
- Managed and audited access card systems for secure facility entry, coordinating credential updates in response to personnel changes and security reviews.
- Produced detailed technical reports to support equipment replacement decisions, enabling informed procurement and seamless transition to upgraded assets.
- Monitored and enhanced CCTV system performance to ensure continuous, reliable security coverage across campus premises.

EDUCATION

Diploma Kemahiran Malaysia — Network Technology

Institut Latihan Perindustrian (ILP) | January 2020 – June 2022

- Server configuration and management: OS installation, role configuration, storage and security settings
- Router and routing protocol configuration: IP addressing, access control lists, inter-network routing
- Computer system and network procurement: vendor evaluation, contract negotiation, IT asset deployment

Sijil Kemahiran Malaysia — Network Cabling & Infrastructure

Institut Latihan Perindustrian (ILP) — Tangkak | June 2018 – December 2019

- Fiber optic network installation, termination, and testing using OTDR and power meters
- Network structured cabling design and implementation (TIA/EIA standards)
- Network fundamentals: OSI model, protocols, data transmission, Ethernet switching

CAREER TRANSITION NOTE — DEVOPS READINESS

Actively building a DevOps skill set on top of a solid infrastructure operations foundation. Current self-development activities include: Linux command-line and Bash scripting, Docker containerization, Git & GitHub version control, and CI/CD pipeline concepts (Jenkins, GitHub Actions). Available to demonstrate hands-on lab projects upon request.
